Serial Nos. 1-10 & 12-21

Part B. for February 1910.

SUBJECT.

Application of Arthur Hungerford Pollen of Linotype & Machinery Ltd for leave to file a specification of the invention for improvement in the Magazines of typographical Composing machines.

1. From Messrs. Remfry & Son Calcutta.
Letter dated 16.2.09.
Forwards the above application and advises remittance of Rs 11/- the application fee and the Stamp fee for the power of attorney.

2. To the Office in charge of the Stable Buildings
No. G.494 dated 7.1.2.09.
Forwards the enclosed with the Treasury the sum of Rs 10 received with Sl. 1.

3. To the Supdt of Stamps.

No Q. 4942. d 27.2.9.

Forwards the power of attorney together with the sum of 10/- and requests that the former may be returned duly impressed with an one Re. stamp.

4. To the Supdt, Govt Press.

No. Q. 4943 d 27.2.09.

Forwards the application for grant of opinion in regard to the grant of leave applied for.

5. To the Supdt of Stamps.

No. 176 dated 1.3.09.

Returns duly stamped the power of attorney sent with Sl. 3 above.

6. From the officer in charge of State Thugs Dy

No. 268 dated 1.3.09.

Acknowledges the receipt of Rs 10/- the only sheet with Sl. 2 above.

7. To the Supdt of Stamps.

No. Q. 5095 dated 9.3.09.

Acknowledges the receipt of the power of attorney returned with Sl. 5.

8. From the Supdt, Govt Press.

No. 761 dated 4.3.09.

With reference to Sl. 4. says that his opinion expressed in his letter 235 of 4.9.08 will apply to this case also.

9. To Messrs. Dempster.

No. Q. 5502 dated 26.3.09.

Enquires whether Mr. A.H. Allen is an inventor or assignee and whether Mr. Rupert Dempster generally signs for Messrs. Dempster & Son.

10. From Messrs. Dempster & Son.

Letter dated 18th May 1909.

In reply to the above, states that in the matter of Joint application (with the one under disposal)

Inventor Applies 2 of 1909-10

No. 761 d 4.7.09 fo. The Supt of Govt Press
With reference to Sl. 4, the Supt Says
that his opinion expressed in his
letter 235 of 4.9.08 will apply to the
Case also.

5 In fact no opinion is
expressed in the Supts letter 235
4.9.08 but a further reference
to his another letter no 35 of 9.7.08
is made there and the opinion therein
expressed is that the machine is
beneficial.

if required will be submitted

6. The applicants say that they have applied for
patents &c both in British India
and in The United Kingdom

7. Though the above two points are
in favour of orders being issued
granted to file a Specification in question
there are certain points which require
explanation beforehand viz.

8. 1) The application is made in the
name of 3 persons of whom the first
is the Director of Linotype & Machinery Ltd
and the other two are the executors of the
Specification in question. Unless
the whole or a portion of the right is made
over by the latter to the first, the name
of the first can not be included in the

Flag W

NOTE—Contn. sheet.

GPB—50,000—13-5-08

Serial No.

application to show that it is the case, no assignment deed has been forwarded

2) The above three, although ~~agents~~ ~~at~~ Cal. for this transaction three agents at Calcutta viz Henry Hamilton Remfry, Rupert Remfry, and Hamilton Greeves Remfry. But the application comes through Remfry & Co

It is not known at all whether "Remfry and Son" includes the above three names.

May a reference be made on the above points?

9. Submitted for orders

(Sd 11.3.05) Another point to be noted is that the application is not signed actually by the applicants but is signed by only one of the Agents viz "Rupert Remfry"

10. Again the Signatures of the applicants and their witnesses are all made in pencil and afterwards inked in the Power of Attorney received here.

(Sd 11.3.05) A copy of Page 2 is kept on for reference

11. Enquiry may be made as proposed. As regards A, all that is necessary to Enquire is whether "Rupert Remfry" personally signs for Messrs Remfry & Son and whether his Signature may be

Submitted

12. Sec 5 (2) of the Inventors & Design Regn Rules states that the application must be signed by the applicant. But Sec 44 gives room for any application to be signed by an Agent in the Territories of Mysore.

13. In the present case, the application is signed by an agent not in Mysore but in Calcutta i.e outside the Mysore State.

14. It is not known whether the present application may be accepted. If this point is settled, then, enquiry may be made as to whether the signature of "Rupert" stands for Rempfry & Son and whether it may be taken as good.

15. Submitted for orders with a Copy of Regn for reference

(Sd 16-3-09) Sd 16. Forwarded to Bro W. for opinion as to whether Mr Pollen can apply for the patent not being the ~~not~~ inventor. & whether Messrs Rempfry & Son can be regarded as Agents in the territories of Mysore

16/3

17. (1) As para 2 could see an application to file a Specification can be made only by the inventor (or inventors) and his assignee (Sec 43). One who is neither an inventor nor an assignee can not apply. ~~Enquiry has been~~ It is possible, however, in this case that Dr Pollen is interested in Smeeway in the invention. This may be enquired into. If it is shown that he does own any interest therein he will be entitled to apply.

18. (2) As regards the second point, it has to be remarked that it is not necessary that the Agent in Mysore should "reside" within the limits of Mysore. If the power of attorney is valid appointing the Agent is good according to the law in force in Mysore, then the person so appointed can act for the principal in Mysore. His actual presence in Mysore would be necessary

GPB—50,000—13-5-08

Serial No.

only if the act requires to be done requires it and not otherwise. Messrs Remfry & Son can therefore be agents for their principal, in Mysore though they reside outside it.

25. On this point, the Indian Patentees' Guide is also consulted. But it is simply stated that documentary evidence must be forthcoming of the right of the applicant if he is not an inventor, but it does not say what procedure is to be adopted when any joint application both in the name of an inventor or inventors and other or others has been made.

Papers marked enclosed

26. Messrs Remfry & Son say that the English and Indian applications made in this behalf are in the same names as that they are acting in the matter of Indian application and no assignment has been called for from the inventors to Mr. Pollen.

27. Orders are solicited as to whether (1) an authenticated copy of the order granted by Govt. of India is to be called for or (2) a reference as to the procedure advisable in such cases is to be made to the Patent Office India, or (3) Messrs Remfry & Son are to be informed that it is not possible to accept the name of Mr. Pollen as an applicant but if they would like, an order in the names of J. G. Holborrow and W. Fletcher who are the inventors, will be issued granting leave to file a specification.

SIR,

In returning herewith the application of Mr. Arthur H. Pollen, a Director of Linotype and Machinery Limited for leave to file a specification of an invention for "Improvements connected with the Magazines of typographical composing machines received with your docket No. G.4 943 G.M.-256-08-4 dated 27th ultimo, I have the honour to invite reference to this office letter No. 235, dated 8th September 1908, and I

...d to state that the opinion
there in given applies to the present
case also.

I have the honor to be,

Sir

Your most obedient Servant

Alan Cunningham

Asst. Superintendent,

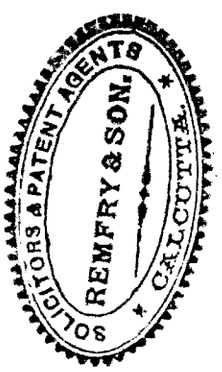
Government Press

To

THE DEWAN OF MYSORE.

The Application of ARTHUR HUNGERFORD POLLEN, a Director of Linotype & Machinery Limited, of 188 & 189 Fleet Street, London, England, JOHN GLENNIE HOLBOURNS, Linotype Operator, of 188 Fleet Street aforesaid, and WILLIAM FLETCHER, Engineer, of Linotype & Machinery Depot, Mercers Avenue, Endell Street, Long Acre, in the County of Middlesex, England, for leave to file a Specification under Part I of the Mysore Inventions & Designs Regulation 1894.

1. The Applicants are in possession of an Invention for "IMPROVEMENTS CONNECTED WITH THE MAGAZINES OF TYPOGRAPHICAL COMPOSING MACHINES" the said John Glennie Holbourns and William Fletcher are the Inventors thereof; and, to the best of their information and belief, the Invention is new within the meaning of Part I of the Inventions & Designs Regulation 1894, and no circumstance exists which, of the Applicants are authorised to file a Specification and file it in accordance with that Part, will disentitle them to an Exclusive Privilege thereunder in respect of the Invention.



Application has been made for a Patent in the United Kingdom in respect of the Invention No. 6027, dated 18th day of March 1908, see Journal No. 1002, page 433. Application has also been made for a Patent in British India on 15th February 1909, Register No. 95 of 1909.

2. The following is a description of the Invention:-

The present invention relates to improvements connected with the magazines of typographical composing machines, the object of it being to facilitate the substitution for the magazine in composing position and containing a certain fount, of another similar magazine containing a different fount.

It is particularly applicable to such machines as have flat magazines removable from their composing positions for changes of fount, as, for instance, the well known Mergenthaler linotype as described in the specification of Letters Patent 14582 of 1890. machine. In this machine, the magazine occupies an oblique position upon the machine, the back of it higher than the front and co-operating with the distributor while the said front co-operates with the assembler.

A substitution, such as above described, is known amongst linotype operators as a "quick change", and several different methods of and means for effecting it, have been proposed.

According to the present invention, two magazines adapted to contain different founts, are pivotally connected to the machine, one magazine having the axis of its pivot along one side of it and the other magazine having that of its pivot along the opposite side of it, the two magazines being pivotted to respectively opposite sides of the machine, whereby either magazine can be turned into and occupy the composing position on the machine, or be turned out of it to make room for the other magazine. The magazines are pivotted along their left and right hand sides instead of along their front and rear edges, for the reason that neither of the said sides is called upon to co-operate with either the distributor or the assembler.

The pivot of each magazine may be of such a type that the magazine can be taken off the machine and another substituted for it.

Thus the substituted magazine in any "quick change" may be

either the one pivotally connected with the machine and, for the time being, out of the composing position ; or it may be one waiting ready to be placed upon the machine. But the present invention avoids substitution from a source outside the machine, excepting when neither of the two magazines pivotally connected therewith, contains the desired fount.

Referring to the accompanying drawings which are to be taken as part of this specification and read therewith and which shew the present invention applied to a Mergenthaler linotype machine.

Figure 1 is a front elevation :

Figure 2, a detail front elevation of the left hand buffer in figure 1 :

Figure 3, a side elevation from the right hand of figure 1 :

Figure 4, a sectional detail elevation of the part detent on the frame :

Figure 5, a plan of a magazine having its pivots on its left hand side and the part detent that is carried by each magazine, at its right hand side :

Figure 6, a side elevation from the left hand of figure 5 : and

Figure 7, a front elevation of figure 5.

Figure 8 is a plan ; figure 9, a side elevation from the right hand of figure 8, and figure 10, a plan shewing a magazine fitted with a modified type of pivot.

The main frame of the machine is represented by part of the distributor bracket 1.

Each magazine pivot is shewn in figures 1 to 7 as consisting of a tee 2 fast to and projecting laterally from the respective side of the magazine, 3 or 4, and a ball 5 likewise fast to and projecting laterally from the same side, the axis of the cross piece of the tee 2 and the centre of the ball 5 being aligned with each other and in the same

plane, the said tee and ball being located the former to the rear and the latter to the front of the transverse median line of the magazine side and resting in respective stationary brackets 6 and 7 which are suitably shaped to receive the lower halves only of the said tee 2 and ball 5 respectively. These brackets 6, 7 are made fast to and project laterally from the respective side of the magazine support, whatever that may be. This support is shewn as being the well known magazine frame 8, and which in its turn rests upon the machine frame in the usual way. It is to be noted that the brackets 6 and 7 have preferably no cap plates, that they receive only the lower halves of the tee 2 and ball 5 respectively, and that the ball 5 and its bracket 7 are in front. This arrangement is to facilitate a "quick change" when the substitution is from a source outside the machine, in which case one of the magazines pivotally connected with the machine must be taken off it. It is taken off by first turning it up on its pivot 2 and 5 till it is vertical and then turning it forward on its ball 5 and finally lifting it off.

The said magazine pivot is shewn in figures 8 to 10, as consisting of two similar and symmetrically positioned stationary brackets 9,9 fast to and projecting laterally from the respective side of the magazine support, whatever that may be; two similar and symmetrically positioned brackets 10,10 fast to and projecting laterally from the respective side of the magazine 3; and a screw 11 working about the axis of the pivot in each bracket 9 and having its nose engaging in a co-operating socket in the respective bracket 10. When each screw 11 has been set in working engagement with the respective bracket 10, it is locked by a suitable lock nut 12. When a magazine fitted with such a pivot is to be "quick changed", the rear screw 11 is disengaged from its bracket 10 whilst the magazine is in the composing position, the later lifted off the machine, the

substitute one put in its place and its rear screw 11 engaged with the co-operating bracket 10.

13 is a buffer mounted in each side of the distributor bracket 1 and projecting into the path of the respective magazine 3 or 4 when it is turned on its pivot out of the composing position. Each buffer is preferably outside the vertical position of the so turned-out magazine, so that the latter having passed its centre, shall lean against the said buffer, as shewn in figure 1. A buffer is preferably fitted with a cushioning spring 14 which surrounds the buffer rod 15 and is resilient between the buffer 13 and the buffer support 16—see figures 1 and 2. The latter is made fast to the bracket 1 by any suitable means.

17 is a grip fast to each magazine on the side opposite to its pivot, to facilitate the act of either turning a magazine up out of the composing position or of turning it down thereinto.

A magazine and its contained fount are heavy. At the moment a "quick change" becomes necessary, one magazine, say the magazine 3 in figure 1, is down in the composing position while the other one, say 4, is leaning against the respective buffer 13. There must be a detent that will engage the turned up magazine as soon as it is up to its buffer 13, and it is advisable that there be also a detent held by the magazine that is in the composing position against the one that is leaning against the respective buffer 13, to prevent it being accidentally disengaged from the first mentioned detent as by the vibration of the machine when it is at work or by anyone pushing the said magazine. To comply with the necessity just explained there is for each magazine a part detent on the frame and a part detent on the other magazine. The part detent on the frame is shewn in figures 1, 3 and 4. It consists of a vertical post 18 capable of a rising and falling motion through a bracket 19 projecting laterally outwards from the

magazine frame 8 or equivalent stationary part of the machine adjacent to the pivot of the magazine with which the detent is to co-operate and preferably midway of the same; a spring 20 resilient between the bracket 19 and a shoulder 21 on the top of the post 18, a bevel or incline 22 on the said top next to the magazine when it is in the composing position, and a vertical flat 23 on the opposite side of the top, the bevel 22 and flat 23 meeting each other in an edge. The parts of the said part detent are so proportioned and positioned that when the respective magazine is down in the composing position the spring 20 holds both the bevil 22 and the flat 23 in the path which the adjacent side of the said magazine will take as it is being turned up out of the said position. As the said side engages the bevel 22, the post 18 is pushed down through the bracket 19, thereby compressing the spring 20, and by the time the opposite side of the magazine is home against the respective buffer 13, the magazine has cleared the post 18 whereupon the spring 20 pushes the flat 23 up over the adjacent face of the magazine, thereby holding it in the turned-up position. 24 is a handle for disengaging the flat 23 from its magazine preparatory to turning the latter down into the composing position. The part detent on a magazine, is shewn in figures 1 and 5 to 10. It consists of a rectangular shaped piece 25 standing up from the top plate of a magazine, to which it is made fast by any suitable means, as by screws 26 screwed down through it and the said top plate into some of the usual division plates inside the magazine, and holding a vertical side 27 of it sufficiently beyond that side of its magazine which is opposite to the pivot thereof, to bear upon the up-turned magazine when its magazine is down in the composing position. The piece 25 is, preferably, upon or near the transverse median line of the magazine.

The usual escapement bar and set of escapements mounted

thereon are not illustrated because they do not constitute any part of the present invention. It is well known in the art that they may be either on the magazine or on the magazine support. The present invention follows this alternativeness and imposes only one condition, namely, that when the escapement bar and set of escapements are mounted on the magazine, the front half of a pivot, say a ball 5 and its bracket 7, must project laterally from the composing position far enough to hold the escapements on the respective magazine when the latter is up against its buffer 13, out of the path which the other magazine will take as it is being turned up out of the composing position or down thereinto.

Any suitable means are used to effect the adjustment of the magazine in composing position for the purpose of making it register properly with the distributor at the rear of it and the assembler entrance in front of it. The necessity of these adjustments is well known as well as what means are capable of effecting them. Each magazine must be adjustable in two directions, one from front to rear and the other from side to side. The means just mentioned are of the type shewn in figures 5 and 3 namely, set screws 28 carried say by the magazine and bearing against brackets carried by say the magazine support or *vice versâ*, it being understood that there is the necessary clearance between a tee 2 and its bracket 6 and a ball 5 and its bracket 7. Figure 8 shews the pivot screws 11 adapted to act as set screws for effecting the front to rear adjustment.

We declare that what we claim is:-

1. In a typographical composing machine, the combination with the machine, of two magazines adapted by being pivoted, each along an opposite side, to the respective side of the machine, to be turned into or out of the composing position.

2. The magazines of claim 1 separately detachable from the machine and with or without means for adjusting each in the composing position.

3. In the subject matter of claims 1 or 2, a magazine pivot consisting of a tee and a ball projecting from the side of the magazine and engaging in stationary journals carried by the machine frame, the ball and its journal being in front of the tee and its journal, and with or without means for adjusting each magazine in the composing position.

4. The combination with each magazine of claim 1 of a detent adapted to engage a magazine when it has been turned out of the composing position and to hold it out thereof.

5. In the subject matter of claim 4 a detent consisting of an automatic part detent on each side of the machine frame, and a part detent on each magazine adapted to engage with and hold the other magazine out of composing position.

6. The combination with the respective subject matter of ~~either~~ any of the preceding claims, of means for moving one magazine out of the composing position while maintaining its connection with the machine; supporting buffers on the machine frame; and means for holding the said magazine against the respective buffer.

3. The Applicants, therefore, apply for leave to file a Specification of the Invention pursuant to Part I of the Mysore Inventions & Designs Regulation, 1894.

Sir,

re A.H.POLLEN & ORS.

In reply to Official Letter No. G.5502/G.M.256.08-9 dated 26th March last, we have the honour to state that according to English Patent Law the Application must be made by the Inventor, or, in the case of a Joint Application one or more of the Applicants must be the Inventor or Inventors. In case of a joint Application in which one or more of the Applicants is or are not the Inventors no Assignment is called for from the Inventor or Inventors to the Co-Applicant or Co-Applicants. This practice is also followed in India. In this particular case we would point out that the English Application No. 6027/08 and the Indian 95/09 are in the same names. We are acting in the matter of the Indian Application and no Assignment has been called for from the Inventors to Mr Pollen.

With regard to the signature of the Application by our Mr R.Remfry we would state that he is a member of the firm of Remfry & Son and as such is entitled to sign under the Power of Attorney herein.

We have the honour to be,
Sir,
Your very obedient servants,

Register No.....2.....**of 190** 9-10.

Bangalore, the 30.7.....*190* 9

WHEREAS an application, dated the....16th February 1909...and received on the..19th February 1909, has been submitted under Section 5 of the Mysore Inventions and Designs Regulation, 1894, by...Messrs Arthur Hungford Dollar, a director of Linotype and machinery Ltd, 188 & 189 Fleet Street London, England, John Glennie Holbourn Linotype operator of 188 Fleet Street aforesaid and William Fletcher Engineer, of Linotype and machinery Debt, Mercers Avenue, Cundell Street Low Acre in the County of Middlesex, England, (hereinafter referred to as "the applicant") for leave to file a specification of an invention for..."Improvements connected with the Magazines of Typographical Composing Machines"

And whereas the applicant has duly complied with all the requirements of Section 5 of the said Regulation;

The Government of Mysore are pleased, under Section 6 of the said Regulation, to authorize the applicant to file a specification of the said invention in accordance with the provisions of the said Regulation.

ORDERED, that the applicant be, and he is hereby, informed accordingly.

By Order of the Government of Mysore,

For Secretary to the Govt. of Mysore,
Gen. and Rev. Depts.

Certified that the fees prescribed in the fourth schedule to the Mysore Inventions and Designs Regulation, 1894, in respect of the application for leave to file the said specification and of the filing thereof have been paid by the applicant, and that the specification hereinbefore described has been duly filed in accordance with the provisions of Section 8 of the said Regulation on this the....twenty...nine...day of.....January 1910. 190 .

For offg Secretary to the Govt. of Mysore,
Gen. and Rev. Depts.

2/17

(Section 8 of the Inventions and Designs Regulation, 1894.)

8. (1) If within six months from the date of an order under Section 6, Sub-Section (1), or within such further time, not exceeding three months, as the Government of Mysore, in its discretion, may, on cause shown to its satisfaction and on payment of the fee prescribed in that behalf in the fourth schedule, see fit to allow, the applicant causes a specification of his invention to be filed in manner by this Part required, and the fee prescribed in the fourth schedule in respect of the filing of the specification to be paid, the applicant shall, subject to the other provisions of this Part, be entitled to the exclusive privilege of making, selling and using the invention in the Territories of Mysore, and of authorizing others so to do, for a term of fourteen years from the date of the filing of the specification.

(2) But an exclusive privilege in respect of an invention of a new manufacture shall, notwithstanding anything in Sub-Section (1), cease, if the inventor fails to pay, within the time limited in that behalf by the fourth schedule, any fee prescribed in that schedule in respect of the continuance of the privilege.

(3) If, nevertheless, in any case, by accident, mistake, or inadvertence, an inventor fails to pay any such fee within the time so limited, he may apply to the Government of Mysore for an enlargement of the time for making the payment.

(4) Thereupon the Government of Mysore may enlarge the time accordingly, on payment of the fee prescribed in that behalf in the fourth schedule, and subject to the following conditions, namely :—

(*a*) the time for making a payment shall not in any case be enlarged for more than three months ; and

(*b*) if any suit is instituted in respect of an infringement of the exclusive privilege committed after a failure to make a payment within the time limited for the making thereof and before the enlargement of that time, the Court disposing of the suit may, if it thinks fit, refuse to award or give any damages in respect of the infringement.
